EXECUTIVE SUMMARY

The proposed Natterra development is located in the southwest corner of Dividend Drive and Point West Boulevard in Coppell, Texas. The site will be a mixed-use development and will contain the following:

- 398,000 SF of warehouse uses with 50 employees and
- 42,000 SF of general office uses with 200 employees.

This study is intended to identify traffic generation characteristics, identify potential traffic related impacts on the local street system, and to develop mitigation measures required for identified impacts.

The following existing intersections were selected to be part of this study:

- Belt Line Road at Dividend Drive
- Belt Line Road at Hackberry Road
- Belt Line Road at IH 635 WB Frontage Road
- Belt Line Road at IH 635 EB Frontage Road
- Hackberry Road at Point West Boulevard
- Dividend Drive at Point West Boulevard

The analysis also included the following driveways providing access for the site:

- Drive 1, which is a full-access driveway to Dividend Drive and will serve both cars and trucks.
- Drive 2, which is a full-access driveway to Point West Boulevard and will serve both cars and trucks.

Traffic operations were analyzed at the study intersections for existing volumes, 2027 and 2032 background traffic volumes, and 2027 and 2032 background plus site-generated traffic volumes. The future years correspond to the expected buildout year of the site and a key future study year. Conditions were analyzed for the weekday AM and PM peak hours. The background traffic conditions included existing traffic with compound growth rates, plus explicit modeling of the following developments in the vicinity:

- Homewood Suites site, a development consisting of 129 rooms located in the southeast corner of Point West Boulevard at Dividend Drive in Coppell, Texas.
- Springhill Suites and Convention Center site, a development consisting of 136 rooms in the northeast corner of Belt Line Road at Hackberry Road in Coppell, Texas.
- Coppell Victory site, a mixed use development consisting of 32,339 SF of retail, 19,296 SF of restaurant, 1,500 SF of patio uses, 7,100 SF for fast-service restaurants, and a 285 room hotel.

The Natterra development is expected to generate approximately 142 new weekday AM peak hour one-way vehicle trips and 139 new weekday PM peak hour one-way vehicle trips at buildout. The distribution of the site-generated traffic volumes onto the street system was based

on the surrounding roadway network, existing traffic patterns, and the project's proposed access locations.

Based on the analysis presented in this report, the proposed Naterra development can be successfully incorporated into the surrounding roadway network given the following recommendations are implemented to the roadway network. The site-generated traffic does not have a disproportionate effect on the existing vehicle traffic operations. Both of the proposed site driveways operate well in the study years.

The following improvements to the site driveways are recommended for the site and are the responsibility of the developer:

- Shift Drive 2 approximately 40 feet north to align with Sheraton Drive

The following improvements to the external roadway network are required for the site and are the responsibility of the developer:

- Stripe a northbound left-turn lane at Drive 2 (100' turn bay + 50' taper)

I. INTRODUCTION

A. Purpose

Kimley-Horn was retained to conduct a Traffic Impact Analysis (TIA) of future traffic conditions associated with the development of the Naterra site located at the southwest corner of Dividend Drive and Point West Boulevard. A site vicinity map is provided as **Exhibit 1**.

Exhibit 2 shows the proposed conceptual site plan. This study is intended to identify traffic generation characteristics, identify potential traffic related impacts on the local street system, and to develop mitigation measures required for identified impacts.

B. Methodology

Traffic operations were analyzed at the study intersections for AM and PM peak hours for the following scenarios:

- 2025 existing traffic
- 2027 background traffic
- 2027 background plus site traffic
- 2032 background traffic
- 2032 background plus site traffic

The capacity analyses were conducted using the *Synchro*[™] software package and its associated *Intersection* reports for signalized intersections and *Highway Capacity Manual* reports for unsignalized intersections.

C. Roadway Characteristics

The following signalized intersections were evaluated as part of this study:

- Belt Line Road at Dividend Drive
- Belt Line Road at Hackberry Road
- Belt Line Road at IH 635 WB Frontage Road
- Belt Line Road at IH 635 EB Frontage Road

The following unsignalized intersection were evaluated as part of this study:

- Hackberry Road at Point West Boulevard
- Dividend Drive at Point West Boulevard

The study roadways are described below.

Belt Line Road

Road Size: 6-Lanes, Divided

Speed Limit: 45 MPH

Thoroughfare Plan Classification: Boulevard, 4 or 6-Lanes Divided

Dividend Drive

Road Size: 4-Lanes, Divided

Speed Limit: 30 MPH

Thoroughfare Plan Classification: Avenue, 2 or 4-Lanes Divided

Point West Boulevard

Road Size: 2-Lanes, Undivided

Speed Limit: 30 MPH

Thoroughfare Plan Classification: Avenue, 2 or 4-Lanes Undivided

Hackberry Road

Road Size: 2-Lanes, Undivided

Speed Limit: 30 MPH

Thoroughfare Plan Classification: Unclassified

IH 635 Frontage Roads

Road Size: 4-Lanes, Divided

Speed Limit: 55 MPH

Thoroughfare Plan Classification: Freeway, 4-Lanes

Exhibit 3 illustrates the intersection geometry used for the traffic analysis.

D. Existing Study Area

The property is zoned in a Highway Commercial District (HC). The property is currently undeveloped.

E. Proposed Site Improvements

The development as proposed will be constructed in one phase which is expected to be completed in 2027 and include the following:

- 398,000 SF of warehouse uses with 50 employees.
- 42,000 SF of general office uses with 200 employees.

As shown in **Exhibit 3**, the site has two proposed driveways. The driveways to be modeled in this analysis are as follows:

Drive 1

- Full-Access to Dividend Drive
- West of Point West Boulevard
- One inbound, two outbound lanes

Drive 2

- Full-Access to Point West Boulevard
- North of Hackberry Road
- One inbound, two outbound lanes

F. Existing Traffic Volumes

Traffic counts were collected on Thursday October 2, 2025. **Exhibit 4** shows the existing weekday AM and PM peak hour traffic volumes. 24-hour machine counts were collected near the site on Belt Line Road and Dividend Drive. The raw count sheets, as well as a comparison between the 24-hour volumes collected and previous 24-hour counts, are provided in the **Appendix** of this report.

The 24-hour count showed the daily volume on the roadway link as follows:

- Belt Line Road: 32,613 vehicles per day (vpd)
- Dividend Drive: 3,750 vehicles per day (vpd)

II. PROJECT TRAFFIC CHARACTERISTICS

A. Site-Generated Traffic

Site-generated traffic estimates are determined through a process known as trip generation. Rates and equations are applied to the proposed land use to estimate traffic generated by the development during a specific time interval. The acknowledged source for trip generation rates is the 12th edition of *Trip Generation Manual* published by the Institute of Transportation Engineers (ITE). ITE has established trip rates in nationwide studies of similar land uses. The trips indicated are actually one-way trips or *trip ends*, where one vehicle entering and exiting the site is counted as one inbound trip and one outbound trip.

The trips for the site were generated using the number of employees that would be working in each portion of the site as provided by the client. Additionally, the client provided the information that there would be 25 trucks per day at the site which would generate 50 daily one-way trips. The ITE Warehousing Truck generation estimated more daily truck trips than the client expects the site to generate. The AM and PM peak hour total trips and the inbound and outbound trips is based on the proportions used by ITE in the trip generation process. The proportions are applied to the client provided number of trucks to generate the truck trips creating the “Adjusted” Warehousing Truck generation for the site.

No reductions were taken for pass-by trips, internal capture, or multimodal use.

Table 1 shows the resulting daily and weekday AM and PM peak hour trip generation for the proposed development, showing new external trips.

Table 1 – Trip Generation

Land Uses	Amount	Units	ITE Code	Daily One-Way Trips	AM Peak Hour One-Way Trips			PM Peak Hour One-Way Trips		
					IN	OUT	TOTAL	IN	OUT	TOTAL
Warehousing	50	Employees	150	254	21	9	30	13	22	35
Warehousing (Trucks) (Adjusted)	25	Trucks	-	50	2	3	5	2	2	4
General Office Building	200	Employees	710	758	96	16	112	19	85	104
Development Totals										
Total Net New External Vehicle Trips:				1,012	117	25	142	32	107	139

Trip Generation rates based on ITE's *Trip Generation Manual*, 12th Edition.

In this report, the terms “heavy vehicles” and “trucks” represent any vehicles whose large size causes them to accelerate and turn more slowly and take up more space than a typical vehicle. Typically, the primary purpose of a heavy vehicle is to transport goods rather than people, though buses would also be included in this category due to their size and operational characteristics. This category includes box trucks or tractor-trailers among other freight vehicles.

The terms “passenger vehicles”, “autos”, or “cars” represent any typical two-axle vehicle. Generally, a car’s primary purpose is to transport people (individually or in groups) rather than goods. These vehicles make up the majority of vehicles using the roadway network. This includes sedans, minivans, pick-up trucks, and SUVs among other non-freight vehicles.

B. Trip Distribution and Assignment

The distribution of the site-generated traffic volumes in to and out of the site driveways and onto the street system was based on the area street system characteristics, existing traffic patterns, relative land use density, and the locations of the proposed driveway access to/from the site.

The corresponding inbound and outbound traffic assignment, where the directional distribution is applied using the most probable paths to and from the site, can be found in **Exhibit 5** for the site-generated cars and in **Exhibit 7** for the site generated trucks. The resulting site-generated weekday AM and weekday PM peak hour turning movements after multiplying the new external trip generation by the respective traffic assignment percentages is shown in **Exhibit 6** for cars and **Exhibit 8** for trucks.

C. Growth Rate

As seen in **Table 2**, based on counts obtained from TxDOT’s Traffic Count Database System (TCDS) and collected counts, the average growth rate along Belt Line Road was -2.4% and along Dividend Drive was -5.9%. Based on the expected annual growth of the area around the development, an annual average growth rate was assumed as 2.0%. The growth rate was used to calculate the buildout year’s background traffic and horizon year’s background traffic. It is expected this growth will account for all the future developments in the area that are not explicitly modeled. The additional information on the historical count data is provided in the **Appendix**.

Table 2 – Growth Rate Analysis

Year	24-Hour Volume	
	Belt Line Road (north of IH 635)	Dividend Drive (west of Belt Line Road)
2014	41,957	-
2019	35,554	5,393
2022	35,554	-
2024	31,225	-
2025	32,613	3,750
Avg. Growth Rate	-2.4%	-5.9%
Annual Growth Rate Used:		2.0%

D. Other Development Traffic Modeling

Using the same procedure as was used to develop the Naterra site-generated traffic and distribute that traffic on the roadway network, traffic was developed and distributed for the Homewood Suites and Springhill Suites developments as well. The Victory Coppel site's trip generation and distribution matched what is proposed in the TIA and trip generation memos provided by the City of Coppel. The distribution and volumes for each of these developments can be found in the **Appendix**.

Homewood Suites will be a 129 room suites-only hotel and will be located in the southeast corner of Dividend Drive and Point West Boulevard. The buildout year for the hotel is 2026.

Springhill Suites and Convention Center will be a 136 room suites-only hotel and will be located in the northeast corner of Belt Line Road at Hackberry Road. Although the buildout year for the hotel is currently unknown, the site is under construction, and it was assumed it would be built before the buildout of the proposed development in 2027.

The Victory Coppel development is a mixed used development consisting of 32,339 SF of retail, 19,296 SF of restaurant, 1,500 SF of patios, 7,100 SF of quick service restaurants, and 285 room hotel that is currently under construction. The Victory Coppel TIA projected a 2024 buildout date, however the site is currently under construction and it was assumed it would be built before the proposed site's buildout in 2027.

E. Development of Background and Total Traffic

The growth rates, background developments, and site-generated traffic included in each scenario is summarized in **Table 3** below.

The existing traffic counts and historic counts near the site were compared to find expected growth trends within the study area. Based on the recent growth in the area, an annual growth rate of 2.0% was assumed for the background traffic.

Table 3 – Development Scenario Included Traffic

Scenario	Percent Growth	Development Traffic Added	Exhibit
2025 Existing	N/A	None	Exhibit 4
2027 Background	2.0% annually	Homewood Suites Springhill Suites Victory Coppell	Exhibit 9
2027 Background + Site	N/A	Homewood Suites Springhill Suites Victory Coppell Site Traffic	Exhibit 10
2032 Background	Additional 2.0% annually	Homewood Suites Springhill Suites Victory Coppell	Exhibit 11

III. TRAFFIC OPERATIONS ANALYSIS

Kimley-Horn conducted a traffic operations analysis to determine potential capacity deficiencies in the 2025, 2027, and 2032 study years at the study intersections. The acknowledged source for determining overall capacity is the current edition of the *Highway Capacity Manual*.

A. Analysis Methodology

Capacity analysis results are listed in terms of Level of Service (LOS). LOS is a qualitative term describing operating conditions a driver will experience while traveling on a particular street or highway during a specific time interval. It ranges from A (very little delay) to F (long delays and congestion). **Table 4** shows the definition of level of service for signalized and unsignalized intersections.

Table 4 – Level of Service Definitions

Level of Service	Signalized Intersection Average Total Delay (sec/veh)	Unsignalized Intersection Average Total Delay (sec/veh)
A	≤10	≤10
B	>10 and ≤20	>10 and ≤15
C	>20 and ≤35	>15 and ≤25
D	>35 and ≤55	>25 and ≤35
E	>55 and ≤80	>35 and ≤50
F	>80	>50

Definitions provided from the Highway Capacity Manual, Special Report 209, Transportation Research Board, 2010.

Study area intersections were analyzed based on average total delay analysis for signalized and unsignalized intersections. For the unsignalized analysis, the level of service (LOS) for a two-way stop-controlled intersection is defined for each movement. Unlike signalized intersections which define LOS for each approach and for the intersection as a whole, LOS for two-way stop-controlled intersections is not defined as a whole.

Signal timings for the signalized intersections are based on the City of Coppell's signal timing models. The Belt Line Road corridor signals run as actuated and coordinated.

The analysis assumed the lane geometry and intersection control shown in **Exhibit 3**.

The peak hour factors (PHF) for the existing traffic are known from the counts collected at the site. PHF for the future traffic and the site-generated traffic is unknown, so where this occurred the PHF was assumed to be 0.92.

B. Analysis Results

Table 5 and **Table 6** show the intersection operational results for the weekday AM and PM peak hours, respectively.

Table 5 – Traffic Operational Results – Weekday AM Peak Hour

C. 2025 Existing Traffic Operations

- The unsignalized intersections operate at LOS C or better.
- The signalized intersections operate at LOS D or better overall.
 - There are very high traffic volumes along Belt Line Road and the IH 635 Frontage Roads. The road is coordinated throughout the area and has long signal cycles to provide efficient flow along its length, so the minor streets see high delays even with low volumes. Regardless of the traffic volumes on the minor streets, LOS E and low levels of LOS F are to be expected and do not represent failing approaches.

D. 2027 Background Traffic Operations

- 2 years of 2.0% background growth added to network.
- Homewood Suites and Springhill Suites background traffic added to the network.
- Unsignalized intersections continue to operate at LOS C or better overall.
- Signalized intersections continue to operate at LOS D or better overall.
 - There are very high traffic volumes along Belt Line Road and the IH 635 Frontage Roads. The road is coordinated throughout the area and has long signal cycles to provide efficient flow along its length, so the minor streets see high delays even with low volumes. Regardless of the traffic volumes on the minor streets, LOS E and low levels of LOS F are to be expected and do not represent failing approaches.

E. 2027 Background Plus Site-Generated Traffic Operations

- Site-generated traffic added to 2027 background traffic.
- Unsignalized intersections to operate at LOS C or better overall.
- Signalized intersections continue to operate at varying levels of service, which is to be expected considering the through volumes along Belt Line Road.
 - The signalized intersections are able to accommodate the site-generated traffic with minimal increases in delay.
- The site driveways to Dividend Drive and Point West Boulevard operate at LOS B or better during both peak hours.

F. 2032 Background Traffic Operations

- 5 years of 2% background growth added to network.
- Signalized intersections continue to operate at varying levels of service, which is to be expected considering the through volumes along Belt Line Road and the IH 635 Frontage Roads.

G. 2032 Background Plus Site-Generated Traffic Operations

- Unsignalized intersections operate at LOS B or better overall with one exception.
 - The southbound approach of Point West Boulevard at IH 635 WB Frontage Road operates at LOS D in the PM peak which is to be expected with the high

through volumes on the frontage road and a single lane serving as the on-ramp.

- Site-generated traffic added to 2032 background traffic.
- Signalized intersections continue to operate at varying levels of service, which is to be expected considering the through volumes along Belt Line Road and the IH 635 Frontage Roads.
- The signalized intersections are able to accommodate the site-generated traffic with minimal increases in delay compared to the 2032 background scenario.
 - The traffic signals are coordinated throughout the Belt Line Road corridor. Major adjustments to the signal timings are not recommended because it will impact the progression of the major movement along Belt Line Road.
- The site driveways to Dividend Drive and Point West Boulevard operate at LOS B or better during both peak hours.

No mitigations are needed at the site driveways or existing intersections to incorporate the Naterra development into the existing street network. The changes in the level of service at the intersections is due to background developments and general growth in the area. The site as proposed will function well with minimal impacts to future traffic operations.

H. Access Spacing

The City of Coppell's engineering design standards, section 13-8-5, require connection spacing of 90 feet between driveways on roadways with posted speeds of at least 30 mph. The standard also requires connection spacing of 30 feet from an existing intersection. As seen in **Table 7**, it is recommended to shift Drive 2 approximately 40 feet north of the proposed location to align with the north Sheraton drive.

Table 7 – Access Spacing

Driveway Location	Spacing Direction	Spacing Provided	City of Coppell Threshold	Driveway Spacing Adequate?
Drive 1 at Dividend Drive	from Point West Boulevard to Drive 1	550 feet	50 feet	Yes
Drive 2 at Point West Boulevard	from Hackberry Road to Drive 2	290 feet	50 feet	Yes
	from south Sheraton Drive to Drive 2	190 feet	90 feet	Yes
	from north Sheraton Drive to Drive 2	40 feet	90 feet	No

I. Right-Turn Lane Analysis

According to Table 2-3 of the Texas Department of Transportation (TxDOT) *Access Management Manual*, it is recommended to have right-turn lanes are driveways along major arterial and collector roads. These right-turn lanes should be provided when the number of right turns exceed 60 vehicles per hour (vph) for roadways with speed limits of 45 miles per hour (mph) or lower, and 50 vph for roadways with speed limits greater than 45 mph.

As seen in **Table 8**, none of the driveways meet TxDOT's requirements for a right-turn lane into the site.

Table 8 – Right-Turn Lane Analysis

Right-Turn Location	Projected Maximum Peak Hour Right-Turn Volume	TxDOT Threshold (Access Management Manual, Table 2-3)	Right-Turn Lane Recommended?
ET Drive 1 from Dividend Drive	12 vph	50 vph	No
ST Drive 2 from Point W Boulevard	12 vph	50 vph	No

J. Left-Turn Lane Analysis

The driveways were also analyzed for left turn warrants using TxDOT guidance. As seen in **Table 9** a left turn lane is warranted at Drive 2.

Table 9 – Left-Turn Lane Analysis

Left-Turn Lane Location	Direction	Projected Maximum Peak Hour Volume			Left-Turn Lane Required?
		Peak-Hour Left-Turn	Major Road Peak Hour Volumes	TxDOT Threshold	
Drive 2 from Point West Boulevard	NBL	48 vph	86 veh/hr/ln	50 veh/hr/ln	Yes

At Drive 1, there are existing 50-foot left turns lanes that provide ample storage to accommodate westbound left turning vehicles from Dividend Drive to Drive 1

According to Table 2-3 of the TxDOT *Access Management Manual* when designing an intersection that provides directional access to the proposed development, left-turn lanes should be provided at driveways and street intersections along major arterial and collector roads wherever left-turns are permitted.

Per TxDOT design criteria, a left-turn lane on a 30-mph roadway, with a 10-mph speed reduction, shall be 150' including a 50' taper (100' turn bay + 50' taper). The turn-bay length to serve Drive 2 is recommended to meet these requirements. It is recommended to stripe in the turn-lane onto Point West Boulevard.

IV. CONCLUSIONS AND RECOMMENDATIONS

Based on the analysis presented in this report, the proposed Naterra development, located at the southwest corner of Dividend Drive and Point West Boulevard in Coppell, Texas, can be successfully incorporated into the surrounding roadway network given the following recommendations are implemented to the roadway network. The site-generated traffic does not have a disproportionate effect on the existing vehicle traffic operations. Both of the proposed site driveways operate well in the study years.

The following improvements to the site driveways are recommended for the site and are the responsibility of the developer:

- Shift Drive 2 approximately 40 feet north to align with Sheraton Drive

The following improvements to the external roadway network are recommended for the site and are the responsibility of the developer:

- Stripe a northbound left-turn lane at Drive 2 (100' turn bay + 50' taper)

Intersection Summary

Area Type: Other

Naterra Industrial TIA
Lanes, Volumes, Timings

2025 Existing PM
8: BELT LINE RD/Belt Line & Hackberry Road

Cycle Length: 160
Actuated Cycle Length: 160
Offset: 14 (9%), Referenced to phase 2:NBSB, Start of Yellow
Natural Cycle: 105
Control Type: Actuated-Coordinated
Maximum v/c Ratio: 1.09
Intersection Signal Delay (s/veh): 13.3
Intersection LOS: B
Intersection Capacity Utilization 62.6%
ICU Level of Service B
Analysis Period (min) 15
~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
m Volume for 95th percentile queue is metered by upstream signal.

Naterra Industrial TIA
Lanes, Volumes, Timings

2027 Background AM
10: Belt Line & IH 635 EBFR

Natural Cycle: 80	
Control Type: Actuated-Coordinated	
Maximum v/c Ratio: 1.00	
Intersection Signal Delay (s/veh): 36.4	Intersection LOS: D
Intersection Capacity Utilization 71.5%	ICU Level of Service C
Analysis Period (min) 15	
# 95th percentile volume exceeds capacity, queue may be longer.	
Queue shown is maximum after two cycles.	

Splits and Phases: 10: Belt Line & IH 635 EBFR

Intersection Summary

Area Type: Other

Naterra Industrial TIA
Lanes, Volumes, Timings

2027 Background PM
8: BELT LINE RD/Belt Line & Hackberry Road

Cycle Length: 160
Actuated Cycle Length: 160
Offset: 14 (9%), Referenced to phase 2:NBSB, Start of Yellow
Natural Cycle: 115
Control Type: Actuated-Coordinated
Maximum v/c Ratio: 1.19
Intersection Signal Delay (s/veh): 15.1
Intersection LOS: B
Intersection Capacity Utilization 67.0%
ICU Level of Service C
Analysis Period (min) 15
~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

Area Type: Other

Naterra Industrial TIA
Lanes, Volumes, Timings

2027 Background + Site PM
8: BELT LINE RD/Belt Line & Hackberry Road

Cycle Length: 160
Actuated Cycle Length: 160
Offset: 14 (9%), Referenced to phase 2:NBSB, Start of Yellow
Natural Cycle: 125
Control Type: Actuated-Coordinated
Maximum v/c Ratio: 1.25
Intersection Signal Delay (s/veh): 17.7
Intersection Capacity Utilization 67.4%
ICU Level of Service C
Analysis Period (min) 15
~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
m Volume for 95th percentile queue is metered by upstream signal.

Naterra Industrial TIA
Lanes, Volumes, Timings

2027 Background + Site PM
10: Belt Line & IH 635 EBFR

Natural Cycle: 90
Control Type: Actuated-Coordinated
Maximum v/c Ratio: 1.15
Intersection Signal Delay (s/veh): 38.6
Intersection LOS: D
Intersection Capacity Utilization 85.4%
ICU Level of Service E
Analysis Period (min) 15
- Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

Naterra Industrial TIA
Lanes, Volumes, Timings

2032 Background AM
9: Belt Line & IH 635 WBFR

Natural Cycle: 90	
Control Type: Actuated-Coordinated	
Maximum v/c Ratio: 1.10	
Intersection Signal Delay (s/veh): 42.3	Intersection LOS: D
Intersection Capacity Utilization 77.5%	ICU Level of Service D
Analysis Period (min) 15	
Volume exceeds capacity, queue is theoretically infinite.	
Queue shown is maximum after two cycles.	
# 95th percentile volume exceeds capacity, queue may be longer.	
Queue shown is maximum after two cycles.	
m Volume for 95th percentile queue is metered by upstream signal.	
dl Defacto Left Lane. Recode with 1 though lane as a left lane.

Intersection Summary						

Naterra Industrial TIA
Lanes, Volumes, Timings

2032 Background AM
10: Belt Line & IH 635 EBFR

Natural Cycle: 90
Control Type: Actuated-Coordinated
Maximum v/c Ratio: 1.10
Intersection Signal Delay (s/veh): 41.3
Intersection LOS: D
Intersection Capacity Utilization 77.5%
ICU Level of Service D
Analysis Period (min) 15
- Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
m Volume for 95th percentile queue is metered by upstream signal.

Analysis Period (min) 15
~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary						

Naterra Industrial TIA
Lanes, Volumes, Timings

2032 Background PM
10: Belt Line & IH 635 EBFR

Natural Cycle: 120	
Control Type: Actuated-Coordinated	
Maximum v/c Ratio: 1.23	
Intersection Signal Delay (s/veh): 43.4	Intersection LOS: D
Intersection Capacity Utilization 91.4%	ICU Level of Service F
Analysis Period (min) 15	
Volume exceeds capacity, queue is theoretically infinite.	
Queue shown is maximum after two cycles.	
# 95th percentile volume exceeds capacity, queue may be longer.	
Queue shown is maximum after two cycles.	

Splits and Phases: 10: Belt Line & IH 635 EBFR

Intersection Summary

Area Type: Other

Naterra Industrial TIA
Lanes, Volumes, Timings

2032 Background + Site PM
8: BELT LINE RD/Belt Line & Hackberry Road

Cycle Length: 160
Actuated Cycle Length: 160
Offset: 14 (9%), Referenced to phase 2:NBSB, Start of Yellow
Natural Cycle: 125
Control Type: Actuated-Coordinated
Maximum v/c Ratio: 1.40
Intersection Signal Delay (s/veh): 21.9
Intersection Capacity Utilization 71.8%
ICU Level of Service C
Analysis Period (min) 15
~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
m Volume for 95th percentile queue is metered by upstream signal.
