Understanding and Approach

USIC will be available 24x7x365 to receive and respond to 100% of the City's locate tickets from the Texas 811 (Lonestar) one call center. USIC will respond to 100% of the tickets received from the one call to determine if a conflict exists between your facility's and the proposed excavation.

The management and servicing of a locate request is a fully automated process that provides immediate access to field personnel. This results in timely and accurate locating by designated Technicians. The request is initiated by the Texas One Call (Lonestar 811) service. Once a locate request is generated our wireless ticket management system accepts the request and records it for archival purposes. Within seconds of receipt, the locate request is routed automatically to the appropriate field Technician based on the geographic location for the excavation request. Upon receipt, the Technician sees a new request in their ticket list that is set-up with a status of new. The field Technician completes the ticket and updates the tickets status. When all work has been completed, including the uploading of digital photographs, the ticket status is changed to "closed" and any positive response requirements are sent to the One Call web based database.

This real-time visibility allows for load balancing and staff augmentation to ensure all requests are handled in a timely manner. The above process, and below diagram show how this process is conducted 24x7x365.

PROTECTING INFRASTRUCTURE

Because of the efficient routing and workflow within our wireless ticket management system, time is not lost for the printing and/or distribution of locate requests. Once the work is completed, the back office billing system is automatically updated and accurate billing is generated from the work completed.

The purpose of the USIC Locate Process is to standardize the way each technician performs their work in certain areas determined to impact quality, while providing a measure of flexibility. The USIC Locate Process acts as an instruction guide to our employees in the proper routine to perform a locate. The USIC Locate Process Stages cover every aspect of a locate and if practiced consistently, will prevent damage to our customer's facilities due to our error. This process has been validated and fully integrated into the training all new technicians receive. The stages are listed below:

USIC Locate Process

•*Stage 1: Evaluate the Job*

- This stage ensures the technician is at the proper address, understands the ticket scope, refers to proper prints and records and does a thorough visual scan of the job site.

•*Stage 2: Identify High-Profile Facilities*

- Stage 2 specifically addresses the identification of high profile facilities and directs the technician to use appropriate extra measures.

•*Stage 3: Prepare for the Locate*

- The tasks in stage 3 deal with properly setting up safety equipment, selecting correct tools to eliminate extra steps, and identification of the best access points.

•*Stage 4: Perform the Locate*

- Steps include direct connecting unless that method is not available, grounding and un-bonding properly, use of lowest power and frequency to produce a detectable signal, proper troubleshooting and applying paint and flags properly.

•*Stage 5: Verify and Document the Locate*

- Stage 5 covers review of prints and ticket scope to verify all facilities in conflict were located, proper billing and notations entered into the USIC ticket management system, attaching post locate photographs and restoring the job site to its original condition.

Managing the Fundamentals of Locating Better Than Anyone Else

One way to think about the basics of our business is to imagine a stool with four legs. This is how we look at the four fundamentals of locating. Each 'leg' is as important as the other. If one is missing, then the entire system simply doesn't perform like it should.

Every day, with every locate, we concentrate on making the four fundamentals work together flawlessly. As a result, we're more efficient—and you're better assured of both cost effectiveness *and* superior service. The four fundamentals are:

1. Safety Management:

'Safety First' is one of the most critical fundamentals. Our Locators are continuously trained on new and better ways to be both safe *and* productive. The result: a strong record of safe performance, day in and day out.

2. Quality Assurance and Damage Protection:

What does it take to be a leader in the locating industry? At the center is a commitment to quality and damage protection that is, quite simply, unprecedented. That's why we lead our industry in infrastructure protection, with as few as one damage per 30,000 locates.

3. On-time Performance:

Our goal is to be 100% on-time all day, every day. It is what you would expect from a professional locating company; and it is what we strive for on every locate.

4. Productivity:

Through our density model (multiple customers at one job site mean the lowest total cost of infrastructure protection for you) we spend less time driving and more time locating. That makes everything we do on your behalf more efficient and cost effective.

1. Quality Assurance/Quality Control Plan

- TicketPro (Ticket Management System): After our 2011 acquisition of Consolidated Utility Services (CUS), USIC owned and operated two proprietary ticket management systems that were designed for receiving and managing locating and marking tickets. Based on ease of use for field Technicians that deliver damage prevention services, USIC opted to utilize CUS's Ticket Rx ticket management system as our uniform system going forward. All USIC districts migrated to an enhanced version of Ticket Rx in early 2012. Now named TicketPro, USIC continues to develop our ticket management system and integrate it with other USIC technologies. Our proprietary

PROTECTING INFRASTRUCTURE

ticket management system manages more underground utility locates than any other ticket management system in the United States.

- **Universal Photo Management (UPM):** UPM is a proprietary USIC technology that automatically uploads and catalogs digital photographs after every ticket is serviced. This system makes time-date stamped photos available near real-time after field services are completed. UPM also monitors technician laptops to ensure that all software is up-to-date while monitoring for unauthorized software.

This keeps USIC field technicians working in an efficient manner while streamlining the potentially confusing work of organizing hundreds of digital photographs taken daily to document a technician's work.

- **Customer Portal:** USIC's web-based customer portal provides access to ticket data, damage investigation data, and various reports and documents. Customer portal pulls data from TicketPro and makes it available to customers through user friendly ticket search engines. Customer portal also pulls data from USIC's claims management system to provide data on damage investigations completed by USIC. Our "generate report" feature provides selectable portions of damage investigations and the applicable locate ticket that preceded the damage. This report, that directly compares post-locate photos to post-damage photos, is proving to be invaluable to customers in resolving underground utility damage responsibility.

- **GPS Logistics Tool:** USIC monitors all field vehicles via GPS technology. This enables us to know the current location of every technician for safety and dispatching logistics. USIC also developed technology that compares GPS travel points to TicketPro data to validate that technicians operated in an efficient manner. Exception reporting enables USIC management to quickly identify rare cases of logistical and fleet abuse keeping our operations efficient and cost effective. USIC also monitors idling via our GPS technology. In 2010, USIC was able to reduce fuel consumption by 16%, a level that we have since maintained, through GPS monitoring and management. This was a significant environment and cost benefit. The next phase of USIC's GPS system is dynamic ticket routing, which is in final developmental phases.

- **Print Update Management Process (PUMP):** PUMP is USIC's unique technology used to send customer print, record, or mapping information to multiple technicians seamlessly via air card access. We have the ability to accept one digital update record at our central office and then identify the applicable technicians in the appropriate service area that required the customer's information. PUMP compares the customer files stored on every applicable laptop to the new record. Every file that is new or change is updated and every change is tracked and auditable. We have the ability to push out updates quickly, which is a clear damage prevention benefit. The automated distribution avoids time spent manually updating laptops which is a significant operational efficiency.

- **Future Technology:** Beyond the base technologies noted that are fully deployed, USIC is testing and developing a variety of future damage prevention technologies. More information is available if additional interest remains.
